Jordan Rivera

Brooklyn, NY | jordan.rivera@example.com | (555) 010-2468 | github.com/jordan-rivera-example

Sample resume for Mentor AI. This person and these companies are fictional.

EDUCATION

B.S. Computer Science | Kings County University (fictional), Brooklyn, NY Expected May 2027

- Minor in Data Science. GPA 3.7/4.0. Coursework: Data Structures, Algorithms, Databases, Operating Systems, Machine Learning, Distributed Systems.
- Teaching assistant, Data Structures (Spring 2026): led weekly labs for 35 students.

EXPERIENCE

Software Engineering Intern | Fieldnote Health (fictional), New York, NY Jun 2026 - Aug 2026

- Built a FastAPI service that syncs appointment data from 3 clinic systems into PostgreSQL; cut nightly sync time from 40 to 9 minutes.
- Added pytest coverage to a legacy billing module (12% to 71%) and caught 4 rounding bugs before release.
- Containerized the service with Docker and wrote the GitHub Actions pipeline that deploys it to Google Cloud Run.

Data Engineering Intern | Harborline Logistics (fictional), Jersey City, NJ Jun 2025 - Aug 2025

- Wrote Python + SQL ETL jobs feeding a BigQuery dashboard used by 20 operations managers.
- Replaced a manual Excel report with an automated daily job, saving the team about 5 hours per week.

PROJECTS

TransitPulse | real-time NYC subway delay tracker 2026

- React + TypeScript frontend and Node.js backend consuming the MTA GTFS-realtime feed; ~1,200 monthly users.
- Cached feed snapshots in Redis to keep p95 API latency under 150 ms.

StudyBuddy | RAG study assistant (campus hackathon winner) 2025

- Python app that answers questions over lecture PDFs using Gemini and a vector index; won Best Use of AI.
- Designed the chunking and evaluation set (50 Q&A pairs) used to compare retrieval settings.

Course Scheduler | constraint-based class planner 2024

- Java CLI that builds conflict-free semesters with backtracking search; used by 60 classmates.

SKILLS

- Languages: Python, Java, TypeScript, SQL, C
- Backend & data: FastAPI, Node.js, PostgreSQL, Redis, BigQuery, REST APIs
- Cloud & tools: Docker, Google Cloud Run, GitHub Actions, Git, Linux
- AI/ML: scikit-learn, pandas, Gemini API, retrieval-augmented generation
